

# platinum doors

aluminium design solutions

Platinum entry doors

are constructed from aluminium and incorporate traditional door designs with today's modern trends and technology. Platinum doors are substantial, strong and have little associated

maintenance. They will not split, swell, warp, or need repainting and are resilient to the elements making them a truly long-term front door option. Platinum doors are manufactured to order, so can be supplied

in standard sizes or custom built to meet your individual requirements. This brochure features our residential range of doors which can be fully customised by choosing your own colours, glass and hardware.

paneldoors

The strong classical look of a recessed panel door will never date and the simple elegant style will complement any house. These doors come in many different designs. Solid panels can be combined with glass panels in the top half of the door, to promote light transmission, while retaining solid door security. Glass panels come in a variety of styles, to add a contemporary edge to your home.

glazed doors

The glazed range of entry doors allows maximum light transmission into your home, while maintaining a contemporary clean look.

With a large range of styles available, and glass options that include, clear, obscure, tinted, sand blasted and double glazed, the glazed door range is perfect for any entrance.

customised doors

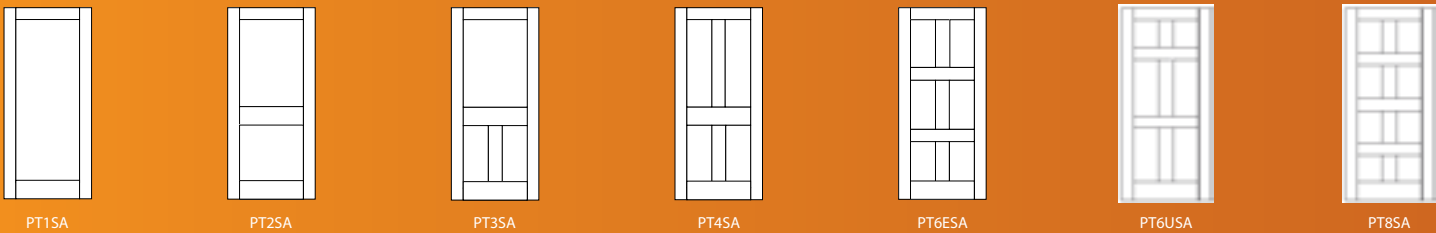

In addition to all standard door designs, Fabtech can custom manufacture doors to meet your individual requirements.

Check with your local fabricator to discuss your needs.

SOLID ALUMINIUM DOORS

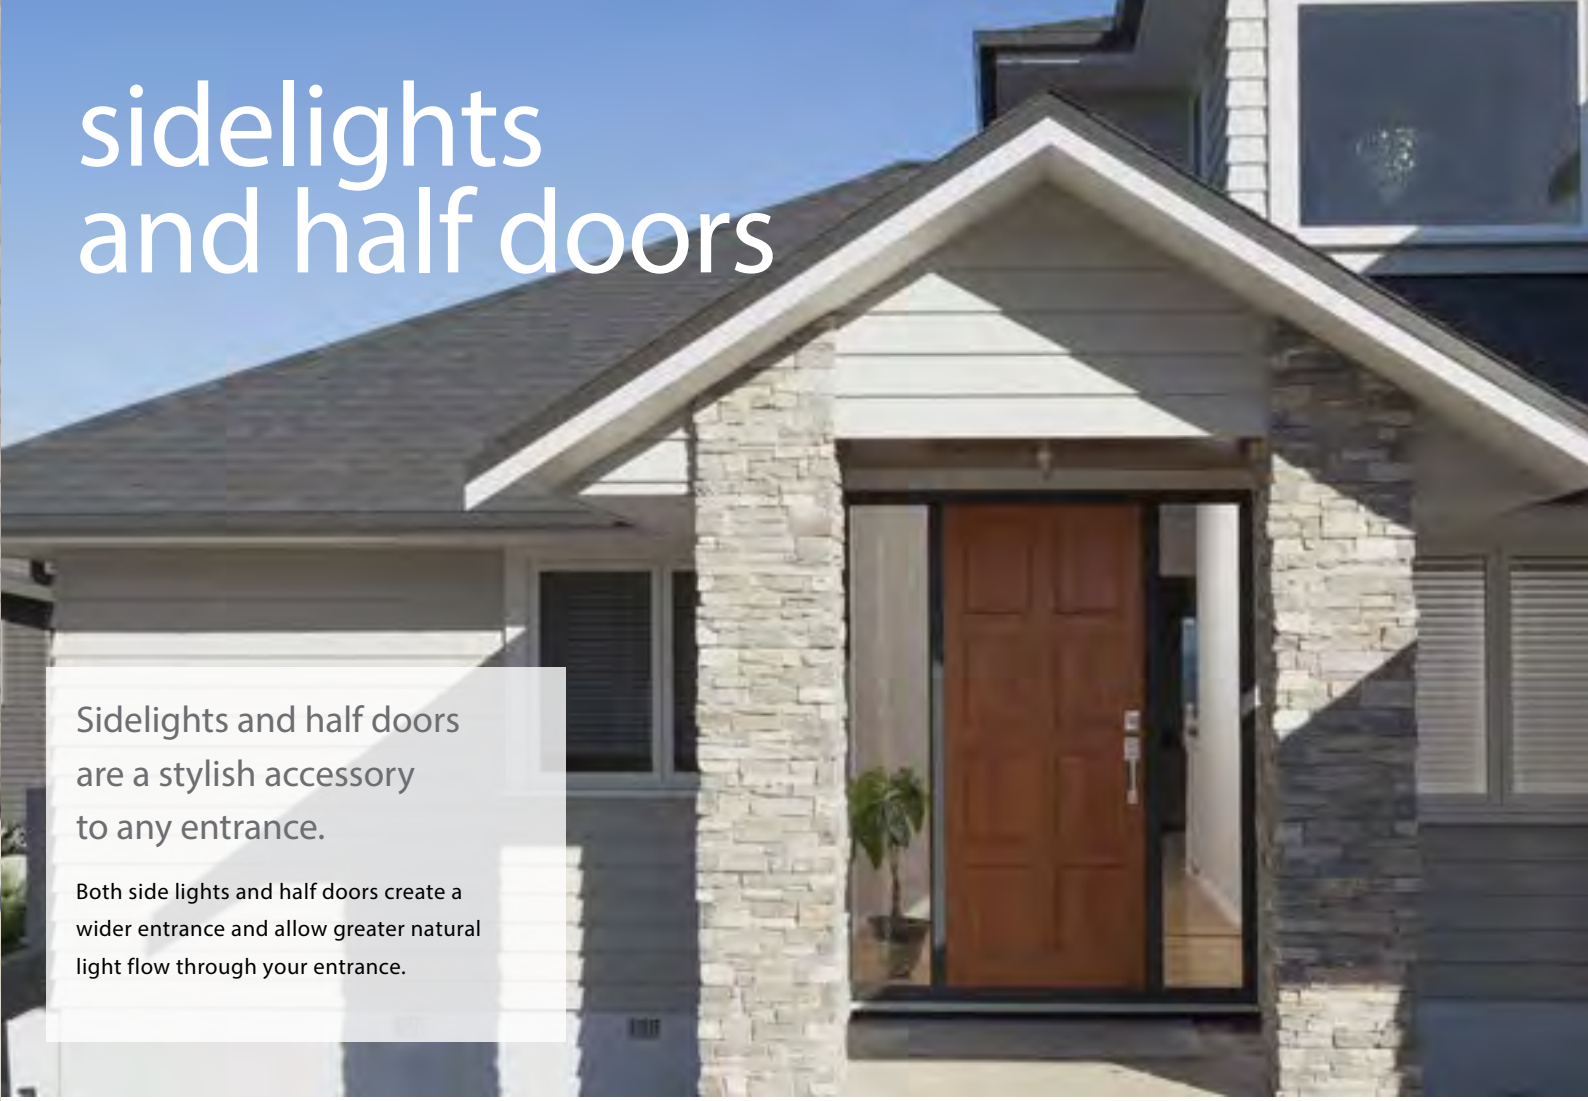

SOLID ALUMINIUM DOORS – GLAZED

GLAZED DOORS

# sidelights and half doors

Sidelights and half doors  
are a stylish accessory  
to any entrance.

Both side lights and half doors create a  
wider entrance and allow greater natural  
light flow through your entrance.

# tongue and groove doors

This is an exciting  
innovation in aluminium  
entry doors.

The aluminium tongue and groove range  
replicates the traditional style of a wooden  
tongue and groove door, resulting in a modern  
stylish door, without the inherent shortcomings  
of a timber panel. The doors are constructed

using aluminium panels that are clipped  
together and held in place by a moulding,  
resulting in an incredibly strong door, that  
will resist warping or twisting.

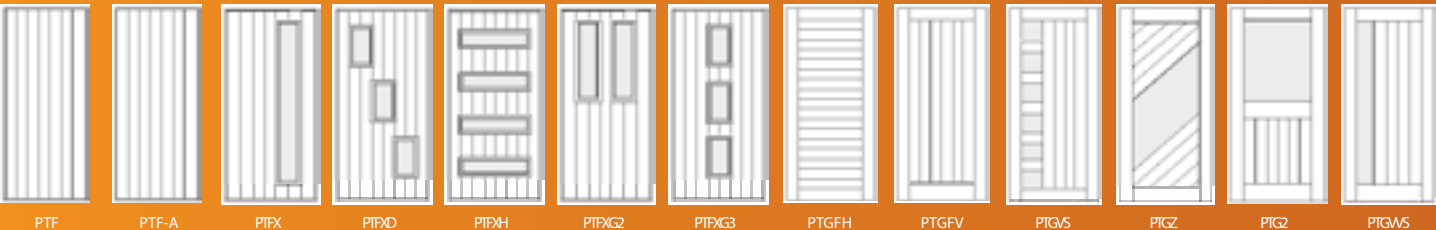

# arched doors

A square door, offset by the sweeping line of an  
arched window creates an entranceway with a colonial  
air and grace.

Arched doors have proved to be very popular,  
especially when used as a grand double door  
entrance. You can incorporate, traditional or  
modern lead lights into these arched doors,  
as well as choosing your own colour and arch  
style; this all results in your own personalised  
elegant entranceway.

There are minimum size restrictions for all arched  
doors. Door appearance will vary depending upon  
door size, due to the fixed moulding dimensions.

# PTO doors

The Platinum PTO door is custom made for a wide range of architectural and commercial settings. They are especially suited to exterior situations and are ideal for security storage,

commercial buildings and egress doors. PTO is ideal for any application that requires a strong, yet lightweight door. PTO doors also make a beautiful contemporary residential entry.

The door is constructed using a sturdy foam filled core, covered with two tough aluminium sheets, providing a stiff secure door that will last the test of time. The door is available in a variety of designs including glazed and louvre options allowing adaptability to a wide range of settings. For commercial applications the door can also be supplied with a 40mm industrial door frame, which comes complete with a door infill and sill.

# H-Faktor doors

The H-Faktor Series, consisting of thermally efficient aluminium entry doors, is the ideal choice to improve energy efficiency. Perfect for residential and commercial buildings that value energy efficiency and elegance. The option of dual colours (inside/outside) provide additional design flexibility.

The thermal break system is the technology that lies at the core of the H-Faktor range of thermally efficient Platinum entry doors. The designers at Fabtech have produced the H-Faktor door, an innovative thermally bridged

aluminium door which reduces heat loss and in turn increases energy efficiency. The H-Faktor door promotes healthy living and is available in most styles of Platinum entry doors.

# Hardware

Your Platinum door will be complemented by installing beautiful hardware.

Whether you prefer a traditional grip-set lock or thumb-turns accompanied by a striking pull handle, Platinum doors are compatible with hardware available from all major manufacturers. For added security, multi-point locks and digital locks are also suitable for use with Platinum doors. Discuss the appropriate option with your supplier or our customer service team.

# wood grain powder finish

A photograph of a modern house's entrance. The house features a combination of stone cladding on the pillars and walls, and horizontal siding on the upper part. The front door is a dark brown color with a wood grain powder finish, set within a white frame. The sky is clear and blue.

The latest in powder coat finish that truly replicates wood. The secret lies in the patented process of heat bonding a wood grain powder finish to aluminium. This not only looks and feels like wood, it is also durable, low maintenance, and unlike wood will never swell, split or warp. There is a wide range of finishes available such as cherry, cedar, walnut and oak. All give a long lasting finish that looks great for years, but does not require the care and maintenance of a wooden door. Wood grain powder coating really has to be seen to be believed.

## colours and glass

There are many colour and glass options available for Platinum entry doors. Refer to the Fabtech colour chart for specific colour matching information. Talk to your supplier about the wide range of glass options available.

### Care & maintenance

Your aluminium products are pre-finished in long-lasting electrostatically applied powder coatings. A combination of painstaking preparation, careful workmanship and the latest technology have come together to bring you your powder coated doors.

Powder coating is one of the most durable colour coatings available and with very little effort on your part will provide many years of excellent service. Powder coatings are maintainable for an indefinite period under normal environmental conditions, provided that the recommended care and maintenance

guidelines are followed. These guidelines are available from our customer service team on 09 574 2900 or may be downloaded directly from our website

[www.fairviewwindows.co.nz](http://www.fairviewwindows.co.nz)

### Warranty<sup>†</sup>

All standard Platinum doors combine a 5 year Workmanship and Weather Tightness Guarantee; with a 15 Year Powder Coating Warranty, covering colour integrity and colour adhesion.

<sup>†</sup> Standard colours only, conditions apply.
